PLASTIC COMPONENTS

DIRKS

DIRKS

PLASTIC COMPONENTS

Dirks is manufacturer of high quality vacuum formed plastic components. Having both, the vacuum forming capabilities and the CNC milling under one roof also enables us to produce small quantities of individually designed components at very competitive prices. We make parts for the vehicle, machine, office, kitchen and furniture industries from all types of thermoplastic based materials up to a size of 2.000 x 1.000 mm. A wide range of colours and finishes are available from environmentally friendly and recyclable material. If required, we can advise on design solutions and also make models and prototypes.

BRIDGE

Image: Stainless steel finish with
Spice jar inserts from beech wood

The distinguishing features of this cutlery insert are its sweeping lines, combining elegance with functionality. The quality of the BRIDGE system is evident in every detail. The plastic materials used are of high quality, environmentally compatible and easy to clean, which can be supplemented by knife and spice jar holders made from solid beech wood. The optional decorative and sealing profile with soft sealing lip ensures a perfect fit in the drawer while lending an additional sense of exclusivity to the inserts.

KOMBI

Image: White gloss with
Knife block from beech wood

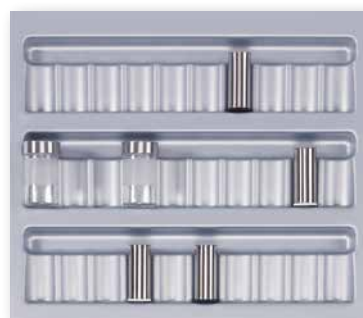

This series of cutlery inserts is our established all-rounder. All carcass measurements can be achieved by means of an extensive range of tools. The subsequent trimming of the edges in the width and depth makes it possible to supply exactly the right size of tray to snugly fit all drawer systems. Once again, the application of recyclable and environmentally-compatible materials is a matter of course. Accessories such as a knife holder and spice jar holders made from solid beech wood are useful additions to this programme. A combination of cutlery and spice pot inserts has been implemented in the KO-GSE series.

The distinguishing features of this cutlery insert programme are the traditional, straight-lined partitions with a predominantly transverse system of compartments. Optional dividers for the lateral vertical compartments are available in sizes CL 600-1200, thus making it possible to organise the space to suit individual needs and tastes. The programme is supplemented by knife holders and spice jar inserts made from plastic.

DIVIDER

WAVE

Image: SLATE GREY

The concave shape of this series, which makes it particularly easy to clean, is a further variation of our range of cutlery inserts. The vertical compartments can be partitioned to meet individual needs by means of dividers or moveable plastic inlay trays. If required, the standard dimensions for a carcass depth of 60 cm can be adapted to suit short and extra-deep units.

INLAY TRAYS
D 180

This series is characterised by its harmonious design. The generous radii make for easy cleaning and space-saving stacking possibilities. If required, this model can also be supplemented by special measurements. This is made possible by our tool design and construction staff who have the ability to provide the appropriate solutions.

SOFTLINE

FLATLINE

Image: Anthracite mat

We manufacture cutlery inserts with a height of 35 mm for height-reduced drawers, for example underneath a cooktop. The space-saving partitioning of the compartments with narrow dividers and small radii offers optimal storage capacity. Of course, these inserts can also be used for drawer systems of various manufacturers by trimming the edges.

CONCORD

Image: Alu metallic with
beech wood

A beech plywood base with a thickness of 10 mm and a grid of holes spaced 32 mm apart is supported by a deep-drawn insert tray made from high-impact polystyrene with variable edges. Dividers made from solid beech wood create partitions for cutlery to suit individual needs. A knife holder is also available from widths starting at 450 mm.

With this flatware storage system, a deep-drawn insert tray also acts as the support for a plywood base with a thickness of 15 mm. The variable edges of the tray can be trimmed swiftly and flexibly to fit pull-out storage systems made by a variety of manufacturers.

The pull-out storage systems in corner units are kept neat and tidy with deep-drawn cutlery inserts suitable for carcass widths of 90 and 105 cm. Deep-drawn containers, each with a volume of approx. 10 litres, can be used for a multitude of purposes. Anti-slip mats or plywood bases with a grid of holes spaced 32 mm apart into which solid beech wood pegs can be inserted can be useful for storing saucepans and tableware.

INSERT
SPACE CORNER

This item is suitable for storing larger kitchen utensils, tools or shoe care products. The standard version is made from high-impact polystyrene with a textured surface finish.

Our decorative and sealing profiles with a soft sealing lip are easy to mount and ensure a perfect and jointless fit of all inserts in the drawers. In addition, the chrome-coloured surface creates a stylish and high-class quality look.

DECORATIVE AND SEALING PROFILES

Containers in deep drawers provide space for the organised storage of food and kitchen utensils. Two sizes are available with capacities of approx. 3.5 l or 7 l. The containers can be combined and arranged in the drawers as desired. In wider drawers, it is also possible, for example, to only use part of the available space for the containers, thereby leaving sufficient room for larger pieces of kitchen equipment. Transparent lids as well as lids in matching colours are available.

The robust, easy-to-clean and removable drawer/shelf liner for sink units with inlay hollows is specially designed to catch leaking liquids. Prevent damage caused by liquids penetrating into the chipboard due to leaky drain pipes, dripping taps or spilled cleaning agents. As an optional feature, a flexible sealing profile, which can be fitted on three sides, provides additional protection.

WATERSTOP

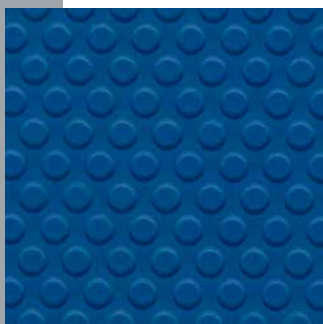

WATERSTOP with sealing profile

Our anti-slip mats are made from physiologically safe plastic materials. They are ideally suited for use as anti-slip and noise-reducing inserts for kitchen pull-out systems, drawers and on the bottoms of carousel units. We supply cut sizes, rolls or standard sizes in a variety of colours. Quality FLEX01 and quality FLEX32 with nap or groove finishes are available as rolls or in cut sizes. The high-quality SUPERGRIP, made from high-impact polystyrene with TPE coating, has outstanding anti-slip properties, and is available in cut sizes or large format.

ANTI-SLIP MATS

SUPERGRIP

Keep things neat and tidy in bathroom cabinet drawers, too. Our inserts provide the perfect solution for storing a multitude of small items and cosmetics. Removable, easy to clean and made to fit the inside measurements of the drawer, this article is a useful accessory in the bathroom.
